# FRACTIONS

(Adding Fractions)

Adding fractions is easy!

For adding two fractions, they must have same denominators i.e. they should be the parts of the same whole thing.

To add the fractions with the same denominators, just add the numbers in the numerators. The denominator will remain the same.

For example:

$$\frac{2}{8} + \frac{3}{8} = \frac{2+3}{8} = \frac{5}{8}$$

Drawing a figure for the fractions may help you in adding them.
