# FRACTIONS

(Equivalent Fractions)

Equivalent means equal or same.

Equivalent Fractions show the same part of the whole thing.

For example:

$$\frac{1}{2} = \frac{2}{4}$$

How to find an Equivalent Fraction

To find an equivalent fraction, multiply both numerator and denominator of the fraction by the same number.

$$\frac{1}{2} = \frac{1 \times 2}{2 \times 2} = \frac{2}{4}$$

$\frac{1}{2}$ is equivalent to $\frac{2}{4}$
