

TIME

'ELAPSED TIME'

Elapsed Time

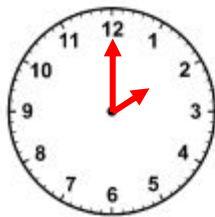

The time passed between any two events.

Use a **CLOCK** to know the time passed between the 'starting' and 'ending' time of an event.

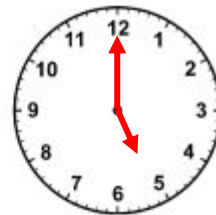

FOR EXAMPLE

Find the time elapsed between **2:00PM** and **5:00PM**.

START TIME

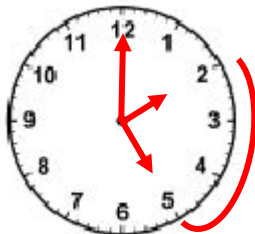

END TIME

We have to find the hours/minutes passed between these two times.

Starting from 2:00pm, count the hours and minutes as you move towards 5:00pm.

As we can see, 3 hours passed between 2:00pm and 5:00pm.

ELAPSED TIME: 3 HOURS
