

MONEY

(Word Problems on Money)

Solving the word problems for money is same as solving other word problems.

We analyze the problem and check what operation (addition, subtraction, multiplication or division) needs to be applied.

For Example:

Sara went to a shop. She bought a book for **\$6.25** and a pen for **\$8.11**. How much money did she spend altogether?

Solution:

We have to find the total money Sara spent on shopping, so we will add both the amounts.

$$\begin{array}{r} \$ 6.25 \\ + \$ 8.11 \\ \hline \$ 14.36 \\ \hline \end{array}$$

So, Sara Spent \$ 14.36.

Similarly, we do subtraction, multiplication and division on the problem according to what is required.
