

'MEASUREMENTS'

Division of Meter and Centimeters

We divide the lengths in meters or centimeters by a number like we divide simple numbers. We just add the unit in our answer.

Look at the examples for a complete idea.

For Example: Divide 210 cm by 5.

Solution:

→ $210 \text{ cm} \div 5 = (210 \div 5) \text{ cm} = 42 \text{ cm}$

By long division:

		4	2	
5	2	1	0	
	2	0		
		1	0	
		1	0	
			0	

$210 \text{ cm} \div 5 = 42 \text{ cm}$
