

Answers

1. How many different species of carnivorous plants are there?

There are over 750 different species of carnivorous plants.

2. Name one type of carnivorous plant.

One type of carnivorous plants is a pitcher plant, which uses a passive trap to trap insects. Another example would be a Venus Fly Trap, which uses an active trap to trap insects.

3. Why do carnivorous plants lure and trap their prey instead of taking all the nutrients they need from the ground?

Carnivorous plants usually live in areas with bad soil condition, so plants can't get all of the nutrients they need to survive from the soil.

4. What is one difference between pitcher plants and Venus Fly Traps?

Pitcher plants use a passive trap to trap insects, while Venus Fly Traps use an active trap to trap insects.
