

Problems on Addition with 4-Digit & 5-Digit Numbers

Now we will learn to solve *word problems involving 4-digit and 5-digit numbers*.

Solving word problems is easy. You just have to carefully analyze the problem, collect the data provided and simply add them.

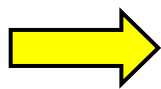

Look at the following example.

Example:

There are 23,500 people living in city A and 55,985 people living in city B. What is the total number of people living in both the cities?

Solution:

We will simply add the number of people living in both the cities to find the total number of people.

$$23500 + 55986 =$$

79486

$$\begin{array}{r} 23500 \\ + 55986 \\ \hline 79486 \end{array}$$

So, 79486 people live in both the cities.
