

## DATA HANDLING

### 'Frequency Tables'

**Frequency tables** are used when data is collected under different categories.

Data is entered in form of tally marks and then frequency is calculated.

The following data was collected when a group of children were asked in which class they study.

Class	Tally Marks(# of children)	Frequency
1		22
2		16
3		13
4		19

The table above shows that 22 children study in class 1, 16 children study in class 2, 13 children study in class 3 and 19 children study in class 4.
