

## HANDLING DATA

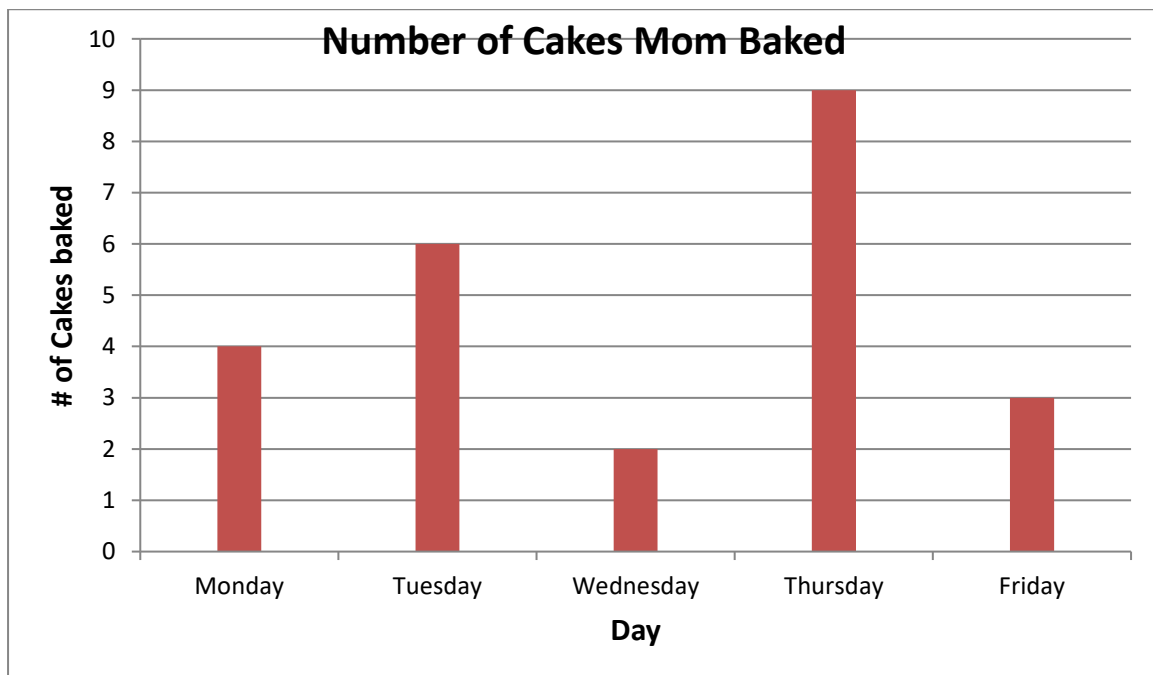

### 'Bar Graphs'

A **Bar Graph** is a way to represent data. It has bars that show a number.

A bar graph has a **title** which shows what the graph is all about.

The **axes** of the graph are both labeled to show the categories and values (numbers).

The following Bar Graph shows the number of cakes my mom baked each day from Monday to Friday.

The Bar Graph above shows that mom baked 4 cakes on Monday, 6 cakes on Tuesday, 2 cakes on Wednesday and so on.
