

SQUARE NUMBERS

Let's now learn about *Square Numbers*!

When we multiply a number by itself, we get a square of that number.

If 'x' is any number, we will multiply 'x' by 'x' to get x^2 (read as x square)

Example:

a) $5^2 = 5 \times 5 = 25$

→ 25 is the square of 5

b) $12^2 = 12 \times 12 = 144$

→ 144 is the square of 12.
