

AVERAGES

'Finding Averages'

Finding an average of a set of numbers is very easy.

Just follow the 2 simple steps and you are there!

Step#1: Find the sum of the numbers give.

Step#2: Divide the sum of the numbers by the number of addends.

Let's look at the following example.

Example: Find the average of the following numbers.

→ 4, 6, 3, 7

Solution:

Sum of the numbers = $4+6+3+7 = 20$

Number of addends = 4

Average = $20 \div 4 = 5$
