

DATA REPRESENTATION

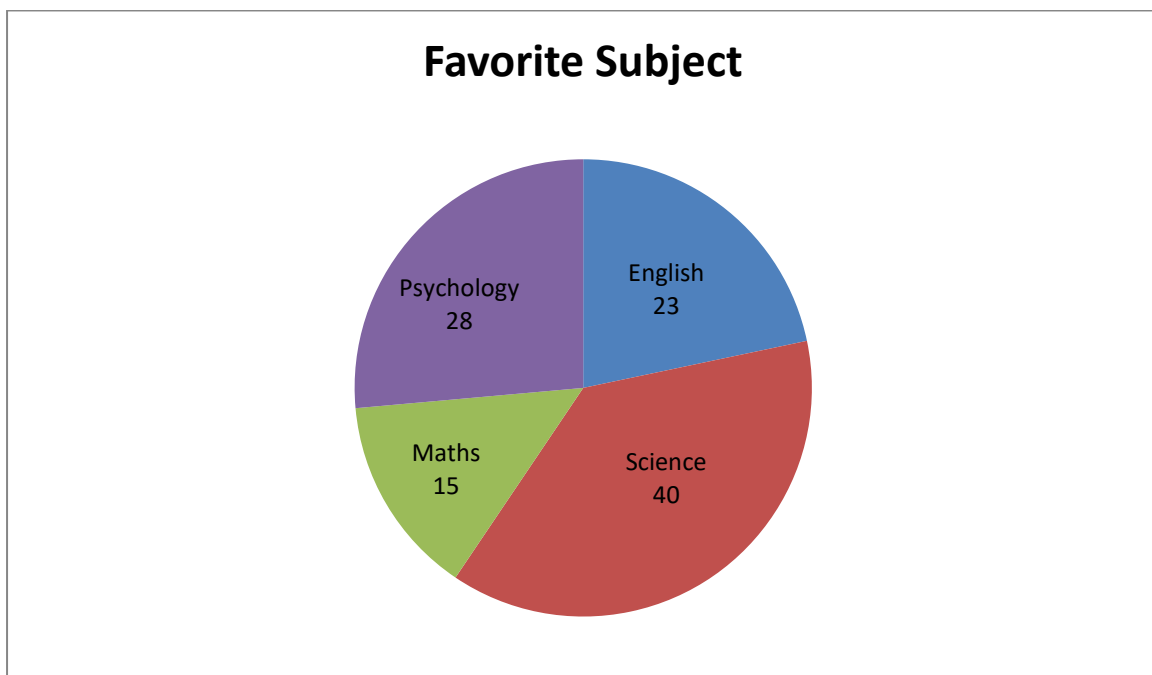

'Pie Charts'

A **pie chart** is used to show the data collected. It represents different categories as part of a whole.

A pie chart is just like a circle shape. The circle is divided in slices/wedges which represent each category of the data.

Example:

The pie chart below shows the result of a survey conducted to know the favorite subject of students.

According to the chart, 40 students like Science, 23 students like English and only 15 students like Maths.
