

DIVISION

'Dividing 2 digit numbers & 3 digit numbers'
(with remainders)

We have already learned division in a lot of detail. When a number is not divided completely by another number, we have a remainder.

Look at the following example to quickly recall the division of a smaller number with a remainder.

Example: Divide!

$$\begin{array}{r} 153 \\ 5 \overline{) 768} \\ \underline{56} \\ 26 \\ \underline{25} \\ 18 \\ \underline{15} \\ 3 \end{array} \longrightarrow \text{remainder}$$

So, $768 \div 5 = 153 \text{ R } 3$
