

DIVISION

'Dividing a 4 digit number by a single digit'
(without remainder)

We have already learned division in a lot of detail.

Look at the following example to quickly recall the division of a 4 digit number by a single digit.

Example: Divide!

$$\begin{array}{r} 623 \\ 7 \overline{) 4361} \\ \underline{42} \\ 16 \\ \underline{14} \\ 21 \\ \underline{21} \\ 0 \end{array}$$

So, $4361 \div 7 = 623$
