AVERAGES

'Word Problems'

Word problems where averages are involved are very easy to solve. Gather the information provided and calculate the average of the numbers.

Example:

Saima's marks for the 4 English tests are listed below. Find her average marks in each test.

➔ 14, 9, 18, 10

Solution:

Total marks = 15+9+18+10 = 52

Number of tests = 4

Average = 52 ÷ 4 = **13**
